OBARA YOZO(54) PRACTICE DEVICE FOR SWING TYPE
EXERCISE TOOL, AND SWING TYPE
EXERCISE TOOL

COPYRIGHT: (C)1997 JPO

(57) Abstract:

PROBLEM TO BE SOLVED: To provide a practice device of a swing type exercise tool which allows tracking a ball with accuracy.

SOLUTION: A triaxial acceleration sensor 1 is mounted inside the head 2 of a golf club (swing type exercise tool). Data on accelerations in the directions of three axes (x-axis, y-axis, z-axis), output from the triaxial acceleration sensor 1, are transmitted on radio to a data processing device using a data transmitter 5 enclosed in a grip 3. The data processing device analyzes the track of a ball and swings based on the data about accelerations in the directions of the three axes, and displays the results on a monitor.
